School Name: San Juan College High School

Area of Science: Behavioral and Social Sciences

Project Title: A load of BULL-lying

Problem definition:

Bullying, a problem in everyday life all around the world. Kids are bullied at school every day, they are bullied on playgrounds and at parks, kids are bullied everywhere. Bullying someone is intimidating someone just to be mean or to try and force them to do something they do not want to do.

Problem Solution:

My partner and I will be creating a simulation to show how many kids end up being depressed or even killing themselves because of bullying to try and bring more awareness to bullying so that we can stop it.

Progress:

We have not been able to even start our project since I (Taylor) at first lost my partner and had to get a new one, then the program refused to work on my computer and the flash drive broke; so I had to wait until my teacher could get the files back onto a new flash drive.

Expected Results:

The expected results for our problem is to help lower the percentage of kids getting bullied as well as lowering the percentage of kids getting depressed or committing suicide by raising awareness with a simulation.

Team Members: Taylor Oehme, Guillermo Paul

Sponsoring Teacher: Geizi Llanes
