Area of Sciences: Behavioral and Social Sciences

Team Members

- Delaney Montoya
- Anaya Stone
- Kiara Onomoto

Sponsoring Teachers:

- Karen Glennon

Project Mentors:

- Karen Glennon
- Patty Meyer

Problem: Every year at the Albuquerque International Balloon Fiesta the traffic is swamped. This can cause accidents as an occurrence of the terrible traffic. Visitors can think this inclination is unpleasing. This major traffic error can result in inconvenience.

Purpose: We want to do this project to reduce the traffic at the balloon fiesta. We also want to analyze the traffic probability. Another purpose is to use the data as a future reference to help the community and tourist. In all we would like to find the key solution to the horrendous gridlock.

Plan of Action: This year we plan on getting information from many different resources. These include interviews, online surveys, and online research. We plan to focus on our research as well as our papers.
