

*Team Number:*

*School Name: McCurdy Charter*

*Area of Science: Biology*

**Project Title:** *The effect of trees in Espanola*

*For our project we would like to figure out the effect trees have in our community. Our community is full of trash and we believe that more trees could benefit the view and our environment. Trees could provide shelter and food for wildlife and people. They also provide a good view to make our community look nice and have people feel better about it.*

*If we use a computer to figure out the rate of trees being planted and what it takes to grow a healthy tree, we can estimate what the trees can provide to our community. We would need to find how long trees take to grow, and what type of trees have the best benefits to have.*

*Team Members*

- *Alain Jayme*
- *Diego Borrego*
- *Joshua Martinez*

*Sponsoring Teacher(s)*

*Mrs. berrhill*

*Mrs. Borrego*

*Project Mentor(s)*
