

School Name: Mesa View Middle School

Area of Science: Pollution (land+water)+ pollution sources

Project Title: Who Pooped in the River?

What if I told you that the water you drink is being contaminated by human scat! Well that is actually the problem. We need the water to be clean for our human necessities such as showering, drinking the water, and growing food. I will check ,multiple websites and scientific journals. I will write a program to simulate and analyze the river pollution on Python or NetLogo. I will talk to city, county state and/or federal experts on river pollution. I want know where it is coming from, to stop the pollution, and educate the public. This topic is important because water is scarce and we will die with out it.
