

```

#include <iostream>

using namespace std;

int main()
{
    string m;
    string f;
    int a;
    string g;
    string h;
    string t;

    cout << " Hello my name is Michael what is your name? \n";
    cin >> m;

    cout << " Hmm... "<<m<<" I like that name \n";
    cout << " Now what is your favorite food? \n";
    cin >> f;
    cout << " oh "<<f<<" that would be good right now \n";
    cout << "Now what is your gender male or female? \n";
    cin >> g;

    if (g == "female")
        cout << " So you are a female \n";

    if (g=="male")
        cout << " So you are a male \n";
        cout << "Now what is your age?\n";
        cin >> a;
        if (a<13)
            cout << "So you are very Young \n";
        if(a>13 && a<20)
            cout << "You are a teenager\n";
        if(a>20 && a<50)
            cout << "You are an adult.\n";
        if(a>50)
            cout << " You are very aged\n";
        cout <<"Now do you have something you do for fun\n";
        cin >> h;
        cout << "Hmm... "<<h<<" that sounds fun you have to teach me sometime\n";

```

```
cout << "Now that I know more about you "<<m<<" you can ask me question and talk to me";
cin >> t;
if(t=="how_are_you_doing")
cout << "Thank you "<<m<<" im doing fine\n";
if(t=="hello")
cout << "hi "<<m<<" \n";
if(t=="are_you_human")
cout << "No sorry im a chatbot \n";
if(t=="what_do_you_do_for_fun")
cout << "I don't do anything but i'm thinking about playing "<<h<<" \n";
if (t=="hi")
cout << " Hello\n";
if (t=="what_is_your_name")
cout << " My name is Michael\n";
```

```
}
